                                                                                             The specification describes the use a polypeptide corresponding to at least the primary sequence of part of the present sequence to produce a diagnostic, prophylactic or therapeutic composition useful in cases of degenerative, autoimmune and inflammatory diseases. The polypeptides can be used in treatment of neurodegenerative disease, lupus erythematosus, rhuematoid arthritis, and SEP, The polypeptides are apoptotic in central nervous system cells, antigenic and specifically recognise the surface receptor of the TRAIL protein. The polypeptide is a marker of disease and a therapeutic target, e.g. its apoptotic activity can be blocked with an anti-TRAIL antibody or a TRAIL equivalent that binds to specific receptors, inhibiting formation of natural complex
                                                                                                                                                                                                                                                                                                                                                   Use of polypeptide derived from TRAIL protein for diagnosis of degenerative disease - autoimmunity and inflammation, also useful in prevention or treatment, and similar use of corresponding ligand and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                       This sequence represents a novel human cytokine, designated Apo-21 ligand (Apo-21). The Apo-21 polypeptide can be produced by standard recombinant methodology. Apo-21 is useful for inducing apoptosis in mammalian cancer cells. This is useful for the treatment of cancer. Apo-21 can be used to induce apoptosis for pathological conditions characterized by decreased levels of apoptosis, e.g. autolmmune disorders like lupus and immune-mediated glomerular nephritis and cancer. Apo-21 and its nucleic acid coding sequence can also be used in quantitative and screening diagnostic techniques. Anti-Apo-21 antibodies can be used for treating diseases associated with increased apoptosis

                     This sequence is the human Apo-2 ligand protein, which is recognised by monoclonal antibodies produced by the hybridoma cell lines of the invention. The hybridoma cell lines are deposited under the American Type Culture Collection Accession Numbers: ATCC HB-12256, HB-12257, HB-12258 and HB-12259. The Apo-2 ligand antibodies may be used in diagnostic assays for Apo-2 ligand, e.g. detecting its expression in specific cells, tissues, or serum. The antibodies may also be employed as therapeutics. For instance, anti-Apo-2 ligand antibodies which block Apo-2 ligand activity, like Apo-2 ligand-induced apoptosis, may be employed to treat pathological conditions or diseases associated with increased apoptosis. They are also useful for the affinity purification of Apo-2 ligand from recombinant cell culture or natural sources. The Apo-2 ligand itself may be used to treat diseases e.g. cancer, by inducing apoptosis in cells
                                                                                                                                                                                                                        Claim 9; Fig la;
                                                                                                                                                                                                                                                               New isolated monoclonal antibodies having antigen specificity for Apoligand, e.g. 2G6, 2B11 or 5C2, useful for detecting the expression of -2 ligand serum, and for treating diseases associated with increased
                                                                                                                                                                                                                                                                                                                                                                                                                      09-JAN-1996;

The present invention describes an antibody that binds to a human protein (I) selected from: PRO381; PRO1269; PRO1410; PRO1755; PRO1780; PRO3434; PRO340127; PRO3567; PRO1295; PRO1293; PRO1303; PRO4344; PRO4354; PRO4397; PRO40407; PRO1555; PRO1096; PRO2038; and PRO2262. (I) has anticancer activity and can be used to diagnose tumours in mammals, by detecting complex formation when the antibody is contacted with test cells. Increased expression of genes encoding (I) can also be detected to
                                                                                                                                                                                                                                                           Antibodies specific for
the growth of tumors in

Agents which inhibit the activity of (I), especially the antibodies, or an antisense oligonucleotide which hybridises to genes encoding (I), can be used to inhibit tumour growth, preferably by inducing cell death. Methods from the present invention can be used to identify compounds which inhibit the biological activity of (I). AAC58019 to AAC58102 represent PCR primers and hybridisation probes used in examples from the present invention for human PRO sequences. AAC58103 to AAC58122 and AAB24021 to AAB24040 represent human PRO polymucleotide and protein sequences given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; TRAIL; tumour necrosis factor; TNF; diterpenoid triepoxide; TNF related apoptosis-inducing ligand; tumour cell; TRAIL receptor ligand; solid tumour; carcinoma; mammary carcinoma; non-small cell lung carcinoma.
                     Killing of tumor cells, e.g. solid tumors or carcinoma, comprises administration of synergistic combination of diterpenoid dispoxide tumor necrosis factor related apoptosis-inducing ligand.
                                                                                                                                                                                                                                                                                                               16-FEB-1999;
                                                                                                                                                                                                                                                                                                                                                            15-FEB-2000;

The specification describes a method for enhanced killing of tumour cells. The method comprises contacting a susceptible tumour cell with a synergistic mixture of a TRAIL receptor ligand and a diterpenoid triepoxide in a combined dosage to kill at least 50 % of the cells. This mixture is synergistic, and so is active at lower doses and against otherwise resistant cell lines. The method is used for killing tumour cells, especially solid tumours or carcinomas (especially mammary carcinoma or non-small cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; AGP-1; type II transmembrane protein; cytostatic; antiviral; antiinflammatory; hepatotropic; antiarteriosclerotic; anti-HIV; HIV; human immunodeficiency virus; apoptosis; proliferative disorder; can hepatitis; acquired immunodeficiency syndrome; AIDS; autoimmune disotransplant rejection; cardiovascular disease; arteriosclerosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is human AGP-1, a type II transmembrane protein. Pusion proteins comprising an FC immunoglobulin region fused to the N-terminal portion of the AGP-1 protein have been produced. The fusion proteins can be used to induce apoptosis in a tissue, and to treat proliferative disorders, immune disorders, or virally-induced disorders. The proliferative disorders include cancers, such as breast, prostate, lung or colon cancer. The viral infections include hepatitis, and acquired immunodeficiency syndrome (AIDS), and the immune disorders may be autoimmune disorders or transplant rejection. Cardiovascular diseases such as arteriosclerosis may also be treated. The AGP-1 containing fusion proteins have increased biological activity compared to the soluble AGP-1 proteins used in prior art therapies

The PRO polypeptides and their agonists, including antibodies, peptides, and small molecule agonists, may be used to treat various tumours, e.g., cancers such as breast cancer, ovarian cancer, renal cancer, colorectal cancer, uterine cancer, prostate cancer, lung cancer, bladder cancer, central nervous system cancer, melanoma or leukaemia. They are also useful for treating other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunological
                                                                                                                                                                                                                                                                                                                                 Sequence 281
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Twenty eight nucleic acids encoding PRO polypeptides which are useful treating various tumors, e.g. breast cancer, and other inflammatory, angiogenic and immunological disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB67243;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (GETH ) GENENTECH INC.
                                                                                                                                                                                                                                                                                                                                                                                                                               present invention relates to a formulation comprising Apo-2 ligand idivalent metal ions. Apo-2 ligand and the formulation are useful for acting cancers and viral infections. Addition of divalent metal ions making Apo-2 ligand and formulations containing Apo-2 ligand results increased yield and stability of Apo-2 ligand trimers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2001-123012/13.

                                                                                                                                                                                                                                      The invention relates to a cytokine designated as tumour necrosis factor (TNF) related apoptosis inducing ligand (TRAIL), which induces apoptosis of certain target cells, including cancer cells and virally infected cells. The TRAIL polypeptides are useful in killing cancer cells, in treating viral infections (e.g. bovine viral diarrhoes or human immunodeficiency virus (HIV)) and cancers (e.g. leukaemia, lymphoma and melanoma), as a research reagent useful in studying apoptosis including the regulation of programmed cell death. TRAIL DNA sequences may be employed in developing a gene therapy approach to treating disorders mediated by defective or insufficient amounts of TRAIL, in the production of TRAIL polypeptides and as probes or primers in polymerase chain reactions (PCR). The present sequence is human TRAIL protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New tumor necrosis factor related apoptosis inducing ligand polypeptides for treating viral infections (e.g. bovine viral diarrhea or human immunodeficiency virus), or cancers (e.g. leukemia or lymphoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2001-595463/67.

GENERAL INFORMATION:

APPLICANT: DEEN, KEITH C.

APPLICANT: YOUNG, PETER R.

ITILE OF INVENTION: TUMOR NECROSIS FACTOR RELATED

TITLE OF INVENTION: RECEPTOR, TR6

NUMBER OF SEQUENCES: 6

CORRESPONDENCE ADDRESS:

ADDRESSE: RAINER & PRESTIA

STREET: P.O. BOX 980

CITY: VALLEY FORGE

STATE: PA

COUNTRY: USA
ZIP: 19482

COMPUTER READABLE FORM:

MEDDIUM TYPE: Diskette

COMPUTER READABLE FORM:

MEDIUM TYPE: Diskette

OPERATION SYSTEM: DOS

SOFTWARE: FASTESQ for Windows Version 2.0

CURRENT APPLICATION DATTA:

APPLICATION NUMBER: US/08/916,625B

FILING DATE: 22-AUG-1997

APPLICATION NUMBER: 08/853,684

FILING DATE: 09-MAY-1997

APPLICATION NUMBER: 60/041,230

FILING DATE: 14-MARCH-1997

ATTORNEY/AGENT INFORMATION:

NAME: PRESTIA, PAUL F

REGISTRATION NUMBER: 63.031

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 C; Comment: Secreted from mitogen-activated macrophages within 4-24 hours after induction out detriment to normal cells. It can also act symergistically with interferon gamma to C; Comment: TNF-alpha and beta (lymphotoxin) are the products of different genes closely ut are produced by different cell types and have different induction kinetics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A;Cross-references: GB:M26331; NID:g339763; PIDN:AAA36758.1; PID:g339764
